# Gas Technical Solutions

Select Gas Technical Solutions is at the forefront of gas appliances and components testing and development, energy labelling and performance testing. In keeping up with rapidly changing markets and innovations our Gas Technical Solutions team offer specialised skills, expertise and know-how to the energy infrastructure industry, providing advice and support through all stages of the product development cycle to ensure the service is second to none.

## Experience the Difference

Select Gas Technical Solutions has a long and strong association and active involvement within the Australian gas industry. Work is conducted in compliance with the Australian and international standards/codes.

## Adding Value

The Gas Technical Solutions Group is a dedicated, enthusiastic and professional team consisting of highly skilled and experienced specialist technicians and engineer. They can provide professional advice, offer competitive market prices and ensure the confidentiality of all work undertaken.

## Emissions Tested:

- Nitrogen oxides
- Carbon monoxide
- Carbon dioxide
- Hydrocarbons

A well maintained laboratory, NATA accredited to ISO 17025, equipped with the latest technology and modern facilities provides a wide range of services guaranteed to ensure your needs are met.

## Services

With the ability to offer customers a wide range of services, from advice and support in concept and product design, to technical support and approval assistance, Gas Technical Solutions can ensure a timely, high quality and competitively priced service.

### Our specialist Gas Technical Solutions capabilities include:

- Testing of domestic/commercial gas appliances and products in accordance with Australian and international standards
- Testing for energy labelling of gas appliances to support energy efficiency promotion schemes
- Product development advice for gas appliance manufacturers and distributors
- Consulting services in indoor air quality, gas combustion, greenhouse gas emission, energy efficiency and labelling
- Odorant analysis and monitoring
- Compositional analysis of natural gas and LPG family gases, and their properties
- Gas related accident and incident investigation
- Provision of general technical information to industry/public
- Testing of plastic pipe and fittings, joints and jointing adhesives, as well as investigation of field failures
- Testing of gas meters and network components
- Miscellaneous services such as the supply of specialised gas mixtures;
- Emissions sampling, laboratory testing and assessment of pollutants from various energy sources.
